WAREHOUSE UNIT COOLER

Walk-Ins: Medium to Large Cooler and Freezer Applications

Warehouse Unit Coolers are designed exclusively for applications 3,000 sq. ft. and larger.

Air Defrost

34,500 to 282,500 BTUH

Electric Defrost

36,400 to 246,100 BTUH

Hot Gas Defrost

36,400 to 246,100 BTUH

FEATURES

Our Warehouse Unit Coolers are the ideal evaporator solution for large walk-in coolers and freezers. Designed with efficiency, performance and service in mind, it's optimized to cover Cold Storage applications in the most effective way. They feature rail-mount three-phase motors with standard or high static pressure prop fan blades. All units are circuited for multiple refrigerants and feature optimized circuit patterns to maximize performance.

Warehouse Unit Coolers have several enhanced service features including new high efficiency fan and venturi designs, enhanced surface coil tubing, easily removable fan guards and modular fan panels, face mount defrost heaters, hinged drain pans and shipping pallets designed to facilitate easy installation.

WAREHOUSE MODELS ARE DESIGNED EXCLUSIVELY FOR USE IN WALK-IN COOLERS AND FREEZERS 3,000 SQ. FEET AND LARGER AND FALL OUTSIDE OF THE JULY 2020 DEPARTMENT OF ENERGY FACTOR (AWEF) REGULATIONS.

SIZES

There are a wide array of sizes to match your specific application requirements ranging from 34,500 to 282,500 BTUH at a 10°TD. Models are available with air flow spanning a range of 6,875 to 27,500 CFM.

HOUSING

Each unit is constructed with a rust-free, textured, aluminum housing which is light weight yet extremely durable. Models feature hinged drain pans to allow for convenient servicing and maintenance. Hanger holes are provided on all units for fast installation.

COIL

Seamless copper tubes are staggered and mechanically expanded into corrugated aluminum fins to assure maximum heat transfer. Die formed fin collars are provided for accurate fin spacing. Heavy gauge hangers are fastened directly to the tube sheet of the coil to provide high structural strength. Low Temp Electric Defrost and Hot Gas Defrost Models are available in both 6 FPI and 4 FPI. Medium Temp Electric Defrost and Air Defrost models are available in 6 FPI.

MOTORS

Models are offered with three-phase motors with standard or high static pressure prop fan blades.

FANS & FAN GUARDS

Powerful heavy-duty aluminum fans are individually balanced to provide vibration free operation. Standard heavy gauge wire fan guards are UL/cUL-approved epoxy coated for corrosion resistance. High-static pressure prop fan blades are also available. Air throw for Warehouse Unit Coolers is 120 ft. with standard fan. If you require a high-static fan prop in an application above freezing, please contact factory.

REFRIGERANTS

Warehouse Unit Coolers are optimized for multiple refrigerants including R404A, R407A, R448A, R449A and R744 DX (CO2). Please specify system refrigerant requirements when ordering. A separate compartment is provided for all refrigerant connections which allows ample room for internal mounting of expansion valves.

AIR DEFROST

Air Defrost models are designed for use in coolers at +35°F and warmer.

ELECTRIC DEFROST - MEDIUM TEMP

Medium Temperature Electric Defrost Models are designed for use in coolers between +10°F and +35°F. Defrost heaters are mounted on the air intake side of the unit for optimal performance and easy maintenance. An additional heater is installed inside the drain pan for fast, reliable drainage. Adjustable defrost termination, fan delay and heater safety controls are factory mounted for optimum performance of each control function.

ELECTRIC DEFROST - LOW TEMP

Low Temperature Electric Defrost Models are designed for use in freezers between +9°F and -30°F. Defrost heaters are mounted on the air intake side of the unit for optimal performance and easy maintenance. An additional heater is installed inside the drain pan for fast, reliable drainage. Adjustable defrost termination, fan delay and heater safety controls are factory mounted for optimum performance of each control function.

HOT GAS DEFROST

There are two types of Hot Gas Defrost models available: a 3-pipe Hot Gas models or a 2-Pipe Hot Gas Reverse Cycle units. Additionally, each type of hot gas defrost model is also available with either a hot gas loop in the drain pan or an electric heater in the drain pan. Hot Gas Defrost 6 FPI models are designed for use in coolers and freezers between 35°F and -30°F, and Hot Gas Defrost 4 FPI models are designed for use in freezers between 32°F and -30°F. All Hot gas models include adjustable defrost termination and fan delay controls, which are factory mounted for optimum performance of each control function. Refer to the current Russell Technical Bulletin for piping. Reverse Cycle units can also be used for Alternating Evaporator Systems.

ELECTRICAL

Available in 208-230V/3 or 460/3. A large compartment is supplied for all electrical components and is easily accessible by removing the end panel. All models are UL and cUL listed.

OPTIONAL FEATURES

- EcoNet® Enabled Controller¹ (factory-installed) (Econet not available on Hot Gas Evaporators)
- EcoNet® Command Center (loose)
- Reverse Connections
- Thermostat - Mechanical or Electric (mounted or loose)
- Thermostatic Expansion Valve (mounted or loose)
- Electronic Expansion Valve (mounted or loose)
- Liquid Line Solenoid Valve (mounted or loose)
- Insulated Drain Pan
- Painted Cabinet (White or Black)
- Stainless Steel Cabinet
- Coated Coil (Bronz-Glow, or Electrofin®)
- Heat Exchanger (loose)

1. EcoNet Control Package includes: EEV, suction pressure transducer, suction entering air coil temp. thermistors, thru-the-door disconnect switch, local on-board two-row backlit LCD display and push-button adjustments. (Controller replaces TXV, liquid line solenoid valve, room thermostat, defrost termination, fan delay, and time clock.)

ECONET ENABLED UNIT COOLERS (OPTIONAL)

- Developed in conjunction with Rheem Manufacturing specifically for walk-in coolers and freezers — it builds on the reliability and efficiency of Rheem's EcoNet technology
- Saves energy in refrigeration systems through precise superheat and space temperature control, fan cycling, and controlling how often the system goes into defrost based on compressor runtime
- Eliminates unnecessary defrosts
- Maximizes energy efficiency with less compressor runtime
- Reduces fan speed to 50% during off cycle for energy savings
- Can be used with a condensing unit in single and multiple evaporator installations as a group
- Optional EcoNet Command Center with intuitive graphical interface controls up to 32 devices (including the Command Center) through one display, continuous communication between system components, and remote mount display allows for EcoNet Enabled Unit Coolers to be programmed, monitored and troubleshot outside of space being cooled.

The distributor lines are 1/4" tube & 31" long.

For other valves, follow manufacturers selection guidelines.

* Each asterisk represents a variable character based on voltage ordered. See page 4 for nomenclature.

[^] TXV selections are based on -20°F suction temp., 8°F to 12°F evaporator TD. Contact factory for operating conditions outside of this range.

† SBFDE ODE, and EBSDE expansion valves are compatible with expansion valves are compatible with R407A, R448A and R449A/B.
