NEXT GEN ALL-TEMP LOW PROFILE
UNIT COOLER

Walk-Ins: Small to Medium
Cooler and Freezer Applications

Air Defrost
4,100 to 45,900 BTUH

Electric Defrost
2,700 to 33,000 BTUH

Hot Gas Defrost
2,700 to 33,000 BTUH

FEATURES

All-Temps were the original low profile unit coolers with the air draw-through design that established the industry Standard as the all-purpose model for walk-in coolers, freezers, and other applications. We've taken these unit coolers to the next level with the release of the Next-Gen All-Temp models. The units feature a new fan guard design and deep draw venturi to achieve optimal airflow and easy access for serviceability. These models can be used with multiple refrigerants, and are available in air, electric, and hot gas defrost configurations.

SIZES

There are a wide array of sizes available with capacities ranging from 2,700 to 45,900 BTUH at a 10° TD. One through six fan models are available with air flow spanning a range of 800 to 4,650 CFM.

HOUSING

The lightweight yet durable embossed aluminum casing is designed to prevent short cycling of the discharge air with baffled fan sections. These units are compliant with NSF requirements and designed to mount flush to the ceiling. The top panel features 1/2" wide slotted mounting points for easy installation. The removable drain fitting is located at the bottom of the drain pan for easy field connection and can be replaced without changing the entire drain pan. The end panels can be easily slid out from the front of the unit, providing convenient access to the spacious electrical and piping compartments from the front or side for easy maintenance.

COIL

Copper hairpins consist of high efficiency 3/8" enhanced copper tubes which are staggered and mechanically expanded into corrugated aluminum fins achieving maximum heat transfer while reducing refrigerant charge. Die formed fin collars provide even fin spacing. Models are available in 4 and 6 fins per inch (FPI). Sweat connections are Standard on all models.

MOTORS

Standard models feature highly efficient Dual Speed Electronically Commutated (EC) motors. Available for 115V or 208/230V and are compliant with California Title 24 regulations. All motors include thermal overload protection.

FANS

Heavy duty 12" aluminum fans are balanced to provide vibration-free operation. Improved black plastic fan guard design and deep draw venturi achieve optimal air pattern.

REFRIGERANTS

Available for 115V and 208/230V. A large electrical compartment is supplied internal to the unit to house the electrical components and is easily accessible by removing the slide out end panel. All models are UL and cUL listed and are available for 60 Hz or 50 Hz applications.

AIR DEFROST

Air Defrost models are designed for use in coolers 35°F and warmer. All components are factory wired to convenient screw-type terminal strips.

ELECTRIC DEFROST

Electric Defrost 6 FPI models are designed for use in coolers and freezers between 34°F to -20°F. Electric Defrost 4 FPI models are designed for use in freezers between 32°F to -20°F. Defrost heaters are mounted on the air intake side of the unit for optimal performance and easy maintenance. A lower heater is installed inside the drain pan for fast, reliable drainage. A defrost termination fan delay thermostat terminates the defrost cycle when the temperature is satisfied. The fan delay allows the warm coil to cool after a defrost cycle prior to the fans turning on. A heater safety thermostat is installed to prevent overheating.

HOT GAS DEFROST

There are two types of Hot Gas Defrost models available: 3-pipe Hot Gas models and 2-pipe Hot Gas Reverse Cycle units (see pages 9 and 10 for more details). Hot Gas Defrost 6 FPI models are designed for use in coolers and freezers between 34°F and -20°F. Hot Gas Defrost 4 FPI models are designed for use in freezers between 32°F and -20°F. All Hot Gas units include a fixed DTFD factory wired and an electric drain pan heater.

OPTIONAL FEATURES

- EcoNet® Enabled Controller[1] (factory-installed)
- EcoNet® Command Center (loose)
- Reverse Connections (Air and Electric Only -- No Options)
- Thermostat - Mechanical or Electric (mounted or loose)
- Thermostatic Expansion Valve (mounted or loose)
- Electronic Expansion Valve (mounted or loose)
- Liquid Line Solenoid Valve (mounted or loose)
- Insulated Drain Pan
- Painted Cabinet (White or Black Russproof)
- Stainless Steel Cabinet
- Coated Coil (Bronz-Glow, or Electrofin®)
- Heat Exchanger (loose)

1. EcoNet Control Package includes: EEV, suction pressure transducer, suction entering air coil temp. thermistors, local on-board two-row backlit LCD display and push-button adjustments. (Controller replaces TXV, liquid line solenoid valve, room thermostat, defrost termination, fan delay, and time clock.)

HIGHLIGHTED FEATURES AND OPTIONS

FANS AND HOUSING

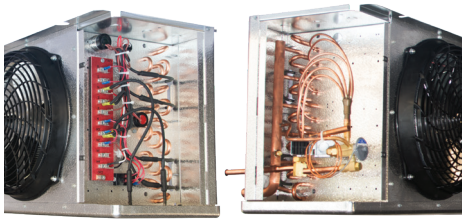
- 12" heavy duty aluminum fans are balanced for vibration-free operation
- Deep draw venturi provide optimal air flow
- Mounts flush to ceiling
- Slide out end panels
- NSF approved

COILS AND DEFROST HEATERS

- Available in 4 or 6 fins per inch
- Electric defrost heaters are mounted on the air intake coil face to provide easy service access
- The drain pan heater is affixed to the drain pan and is easily removable for service or cleaning

ELECTRICAL AND PIPING

- End panels slide out for easy service from the front or sides of the unit
- Ample room in electrical and piping compartments for easy access



*Unit shown with optional components installed

ECONET ENABLED UNIT COOLERS (OPTIONAL)

• Developed in conjunction with Rheem Manufacturing specifically for walk-in coolers and freezers – it builds on the reliability and efficiency of Rheem's EcoNet technology.

• Saves energy in refrigeration systems through precise superheat and space temperature control, fan cycling, and controlling how often the system goes into defrost based on compressor runtime.

• Eliminates unnecessary defrosts

• Maximizes energy efficiency with less compressor runtime

• Reduces fan speed to 50% during off cycle for energy savings

• Can be used with a condensing unit in single and multiple evaporator installations as a group.

• Optional EcoNet Command Center with intuitive graphical interface controls up to 32 devices (including the Command Center) through one display, provides continuous communication between system components, and the remote mount display allows for EcoNet Enabled Unit Coolers to be programmed, monitored and troubleshot outside of the space being cooled.

EVAPORATOR APPLICATION RATINGS

Multiple conditions combine to determine the application capacity of an evaporator. Walk-in space temperature, relative humidity, saturated suction temperature difference, and outdoor ambient temperature. All of the factors are considered when calculating an evaporator application rating. These ratings are considerably higher than the net capacity value used for DOE ratings (AWEF). The AWEF of an evaporator is calculated using the dry coil capacity and the DBily evaporator power consumption. Power consumption included fan and defrost power. Evaporator net capacity reported to the DOE DATAbase is dry coil capacity less the full power fan watts. DOE test conditions are at 10°F evaporator/SST temperature difference and less than 50% relative humidity and 96°F liquid temperature. These conditions create a uniform test method, but should not be used for equipment selection. The equipment selected would be too large for the application. Our published application ratings are a guideline for proper equipment selection. They account for true operating conditions experienced by equipment.

1. Refrigerant and electrical connection locations have been changed for the Next-Gen All-Temp design. Standard connections "L" are now opposite of the legacy All-Temp models. Mirror connections "U" are the same end as legacy All-Temp models and are available only as built-to-order base units with no installed options. Mirror connections not available on hot gas units.
2. Pre-Configuration Codes are used to show common Factory Mounted options. Pre-Configuration Codes are not available for every model. For specific model availability, see the respective Pre-Configuration pricing tables in the Russell List Price or contact your local Russell sales representative.
3. EcoNet approved refrigerants are: R404A, R407A, R407C, R448A, R449A/B, & R507A.
4. EcoNet Control Package includes: EEV; suction pressure transducer; suction, entering air coil temp. thermistors; local on-board two-row LCD display and push-button adjustments. (Controller replaces TXV, liquid line solenoid valve, room thermostat, defrost termination and fan delay, and time clock.)
5. Models with Pre-configured Mechanical Components (TXV, LLSV and Thermostat) are rated for +25°FSST/10°FTD (Air Defrost) and -20°FSST/10°FTD (Electric Defrost).
6. Legacy all-temp air and electric defrost models and are available only as built-to-order units with not installed options.

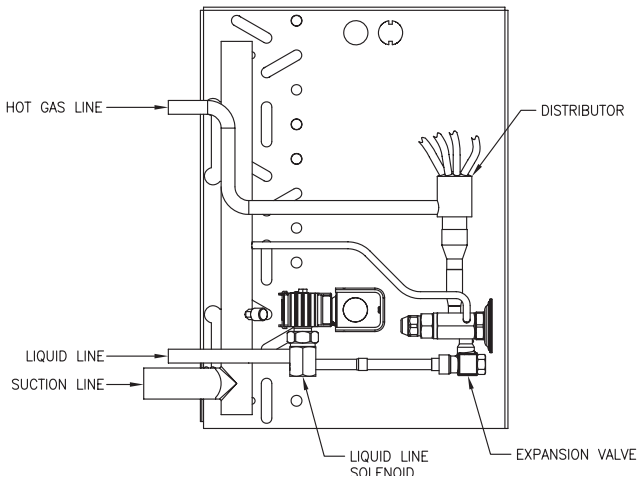
Hot Gas 3-Pipe Model

The system uses 3 pipes — 1 for liquid line, 1 for suction line and 1 for hot gas. The hot gas is taken from the discharge line, between the compressor and the condenser, through a hot-gas solenoid valve to the distributor tee then through the coil.



Base Model MCA/MOPD Represents Motor Circuit since Defrost Heaters are powered via the Condensing Unit.
* Each asterisk represents a variable character based on voltage ordered. See page 5 for nomenclature.
^ Refrigerants with large glides are rated at dew point temperature. Use R407A capacity ratings for R407C and R407F.
† Dual Speed EC motors are compliant with California Title 24 regulations.
Models were designed in anticipation of the July 2020 Department of Energy AWEF regulations for evaporators for Walk-in Coolers and Freezers in boxes less than 3,000 sq. ft. See page 17 for AWEF compliance ratings.

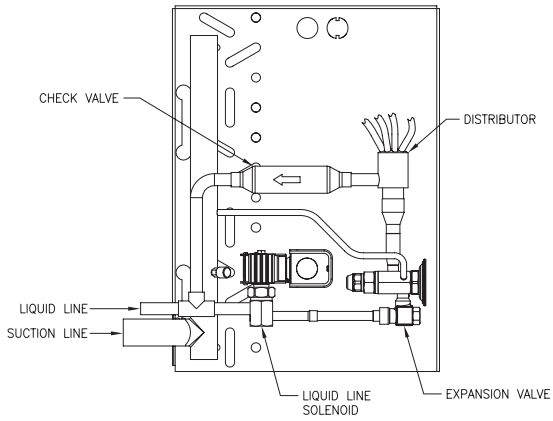
Hot Gas Reverse Cycle 2-Pipe Model

A changeover valve is located in the discharge suction line of the compressor, so that when defrost is required, the valve changes over from the normal refrigeration flow so that the discharged gas flows into the suction connection and bypasses TX valve.



See notes on page 9

Distributor lines are 3/16" diameter and 14" long. Distributor connection size is 1/2" for all air defrost models.

* Each asterisk represents a variable character based on voltage ordered. See page 5 for nomenclature.

– Single feed circuit coils do not get a distributor/nozzle. Line breaks in the table above are per number of fans.

^ TXV selections are based on +25°F suction temp., 8°F to 12°F evaporator TD. Contact factory for operating conditions outside of

† SBFDE expansion valves are compatible with R407A, R448A and R449A/B. For other valves, follow manufacturers selection guidelines.
Base models (no factory-mounted components) include nozzles sized for 100°F liquid shipped loose.

Distributor lines are 1/4" diameter and 14" long. Distributor connection size is 1/2" for all hot gas defrost models with "L" nozzle and 1-1/8" for models with "E" nozzle.

* Each asterisk represents a variable character based on voltage ordered. See page 5 for nomenclature.

– Single feed circuit coils do not get a distributor/nozzle.

^ TXV selections are based on -20°F suction temp., 8°F to 12°F evaporator TD. Contact factory for operating conditions outside of this range. Do not use pressure limiting TXVs when the condensing unit includes a CPR valve.

Distributor lines are 1/4" diameter and 14" long. Distributor connection size is 1/2" for electric defrost models with "L" nozzle and 7/8" for models with "G" nozzle.

* Each asterisk represents a variable character based on voltage ordered. See page 5 for nomenclature.

– Single feed circuit coils do not get a distributor/nozzle. Line breaks in the table above are per number of fans.

^ TXV selections are based on -20°F suction temp., 8°F to 12°F evaporator TD. Contact factory for operating conditions outside of this range. Do not use pressure limiting TXVs when the condensing unit includes a CPR valve.

† SBFDE expansion valves are compatible with R407A, R448A and R449A/B. For other valves, follow manufacturers selection guidelines.

Base models (no factory-mounted components) include nozzles sized for 100°F liquid shipped loose.

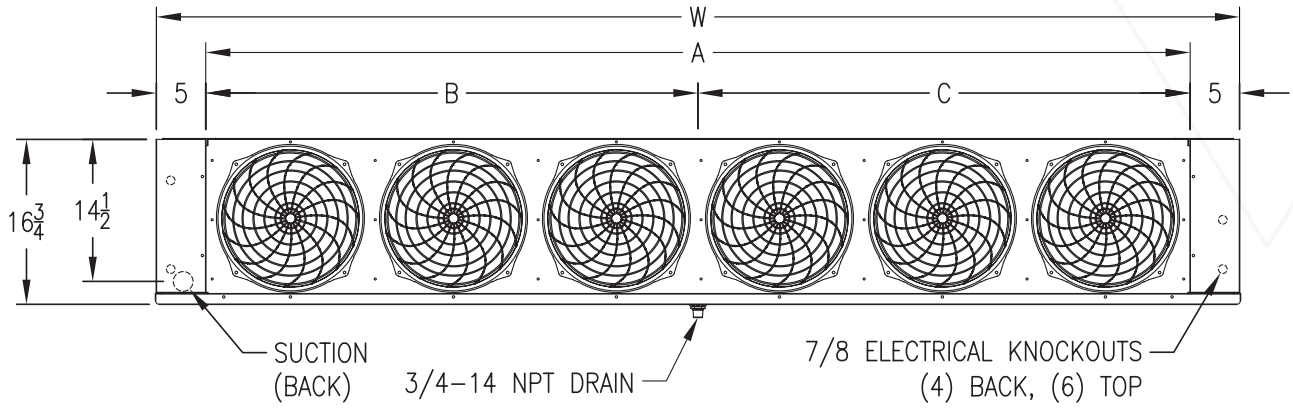
* Each asterisk represents a variable character based on defrost and voltage ordered. See page 5 for nomenclature.
– Not available.
† Externally equalized.
^ For units with mounted TXV components. See Nozzle/TXV table for distributor connection size when TXV is field installed.
1. Dimensions listed are the distance between hanger slots. Hanger slots are 3/4" deep x 1/2" wide.

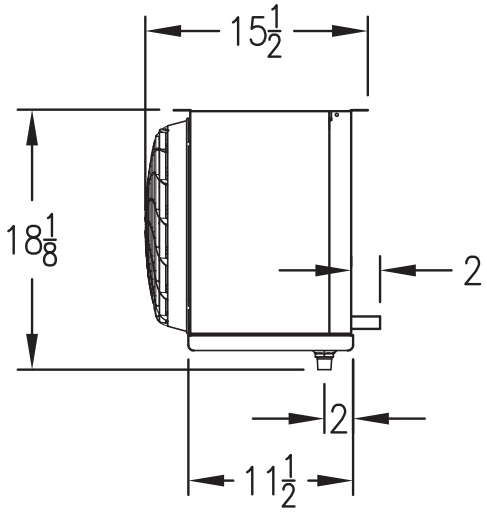
PHYSICAL DIMENSIONS

Figure 1 - Single Fan

Bottom View



Side View



Installation Notes: All dimensions are in inches.
(1) Install 12" away from back wall.
(2) Drain connection is located in the center/rear of the drain pan.
(3) Standard refrigerant connections are located at the left rear (facing air discharge).

The Next-Gen All-Temp Low Profile Unit Cooler can be used in combination with Next-Gen MiniCon Condensing Units to provide complete refrigeration solutions for small to medium walk-ins.

Due to continuing product development, specifications are subject to change without notice.

Refrigerant and electrical connection locations have been changed for the Next-Gen All-Temp design. Stanarrd connections are now opposite of the legacy All-Temp models.
