

ASLA/ASLE

SLIM-TEMP UNIT COOLER

Low and Medium Temperature
Small Walk-in Coolers & Freezers and
Display Cases

Air Defrost 4,800 to 17,300 BTUH

SLIM-TEMP

Features

The Slim-Temp ALSA / ASLE Unit Coolers are versatile products that are specifically designed for cooling small walk-in coolers and freezers and display cases. Slim-Temp models are low height and compact. The slim profile takes up less room and maximizes available shelf space. Units are available with air or electric defrost, for low or medium temperature applications and are solidly built with heavy gauge aluminum housings.

Standard Features

- All models require externally equalized Thermostatic expansion valves
- ASLA capacity ratings at +25°F evaporator temperature
- ASLE capacity ratings at -10°F evaporator temperature.
- All Aluminum low silhouette housing
- Fan motors are totally enclosed, permanently lubricated and thermally protected
- Electrical connection made at internal terminal blocks located at end opposite refrigerant connections
- UL & cUL listed
- NSF approved

Optional Features

 Protective Russ-Proof epoxy coil coating extends the life of the coil

	A - Air E - Electric	2 - 6 fans			A - 115/1/60 D - 208-230/1/60	D - Dual Speed EC	

EVAPORATOR APPLICATION RATINGS

Multiple conditions combine to determine the application capacity of an evaporator. Walk-in space temperature, relative humidity, saturated suction temperature difference, and outdoor ambient temperature. All of the factors are considered when calculating an evaporator application rating. These ratings are considerably higher than the net capacity value used for DOE ratings (AWEF).

The AWEF of an evaporator is calculated using the dry coil capacity and the daily evaporator power consumption. Power consumption included fan and defrost power. Evaporator net capacity reported to the DOE database is dry coil capacity less the full power fan watts. DOE test conditions are at 10°F evaporator/SST temperature difference and less than 50% relative humidity and 96°F liquid temperature. These conditions create a uniform test method, but should not be used for equipment selection. The equipment selected would be too large for the application.

Russell's published application ratings are a guideline for proper equipment selection. They account for true operating conditions experienced by equipment.
