Subject: Low Velocity Evaporator redesign

Be advised that the LV - low air velocity evaporator model line, LV, has been redesigned to provide both product improvement and an increase in the number of available models. Units are now identified with a new "smart" part number and range in capacity from 5,000 to 34,000 Btuh @ 10°F TD. The number of available models has increased to nine, with the smallest model, KWF050, being a single fan unit which is new to the product line.

Please review the enclosed product literature and supplemental price sheet for further information regarding this product. Place these items into your catalog for future reference.

This information is now accessible from the Kramer website at <http://kramer.htpgusa.com> and is available for order from the literature warehouse.

ACTION: Notify your reps and customers of the availability of these resources. Please place the information into your catalog and retain this notice for future reference.
