

PRODUCT INFORMATION NOTICE

PIN No: LIT-72A

Date: February 21, 2017

By: Joe Berry

Issue: Literature Updated

Subject: Next-Gen II™ Version RU-NG2-0217B

This PIN serves as notification of important changes to product literature, RU-NG2-**1117A**. PDF files and printed copies were initially released for use during training meetings on Feb 7 & 8, 2017. A newly revised document replaces the original and has been posted to the Russell website. We expect that printed materials will be available to ship from the literature warehouse on Friday, March 3.

We have made numerous changes to the Next-Gen II™ 3-22 HP air cooled condensing unit product brochure since it was initially released in January 2017. You can identify the latest product bulletin by the new file name located in the upper right hand corner of the document cover. It is currently date coded **0217B**: as in RU-NG2-0217B. **Note: There are no pricing changes associated with the brochure modifications.**

The recent changes to the product brochure are shown below:

1. Cover Page: Document name change as described above.
2. Liquid injection/Demand Cooling™ is now shown as now standard feature for low temperature compressors. This change is noted on pages 3, 4, and pages 20-31. Colored shading has been removed from the capacity tables for pages 20-31 to reflect the design change.
3. Page 4: 50 Hz voltage codes were added to coincide with 50 Hz electrical data already contained in the document.
4. Pages 5-19: Capacity data has been revised for 40°, 35° and 30° temperature columns.
5. Page 7: Capacity data for Medium Temp R407C Discus models has been revised in the 95° and 110° ambient tables.
6. Page 26: Capacity data for Low Temp R407C Scroll models has been revised for the 95° ambient table.

Catalog literature can be ordered by utilizing the website order form found at this link:
