

# PRODUCT INFORMATION NOTICE

*PIN No:* TCO- 39W  
*Date:* February 22, 2011  
*By:* Joe Berry – Marketing Manager  
*Issue:* New Condensing units models  
*Subject:* **311.7 G-Series Product Brochure**

Please find the subject publication enclosed. This latest document introduces Witt's new R404A high and medium temperature **hermetic compressor** condensing units to our ½ H.P. to 6-½ H.P. air cooled package.

The previous R-Series 404A **hermetic** compressor models are being phased out, with previous condensing units that utilized discontinued compressors already having been removed from the product offering. Refer to TCO-38.r1 for further details regarding these discontinued units.

- New models include Witt's G- series G\*H\*\*\***H**44, R404A high temperature condensing units. These models utilize extended range compressors which are available in higher than previously offered suction temperatures, from +35°F to +40°F.
- Witt's medium temperature hermetic offering, G\*H\*\*\***M**44, now also utilize extended range compressors allowing for suction temperatures ranging from +30°F down to -25°F. Model numbers for these **hermetic compressor** units have been changed. Reference page 4 of the enclosed 311.7 for further details regarding operating range, capacity information and model numbers.
- The new product bulletin has also been reformatted, now including separate capacity tables for ambient temperature of 90°F, 95°F, 100°F and 110°F.

This notice coincides with the release of the latest Wittbox 6.4 box load calculator and system quote software which includes the new models mentioned above along with the latest January, 2011 pricing.
