

Russell is now shipping 134a, HP-62, AZ-50 refrigeration systems

A full line of condensing units, 3 through 80HP, as well as complete systems, condensers and evaporators — all compatible with ester based oils, designed and circuited to provide top performance and a reliable long life using the ozone-friendly refrigerants 134a, HP-62 and AZ-50 — are now available as standard catalog items from Russell.

We're also working with the major compressor manufacturers and have Russell equipment working now with other new refrigerants. That means, whatever your refrigeration needs are or will be in this zero-ozone-depletion era, we're up to speed and ready to work with you. We'll even provide equipment using your favorite, specified compressor — any of the top brands.

For product specifications and pricing, see your local Russell distributor. Or, in the Missouri, Kansas and Southern Illinois region call Jim Todd and in Northern Illinois and Indiana call Butch Ohlrich.
