

A strong force in the industry

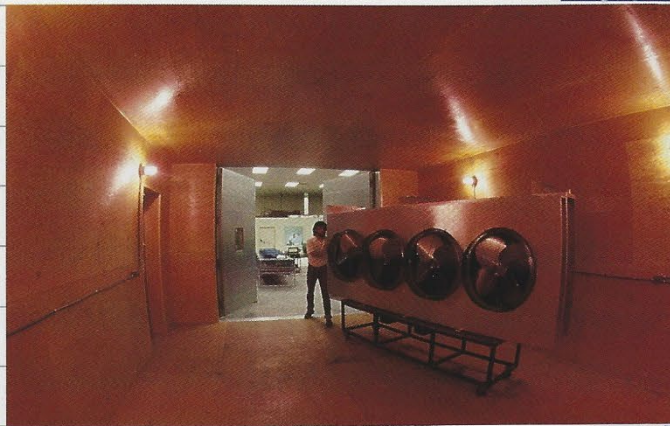

The Heat Transfer Products Group has been serving the refrigeration industry for over 40 years.

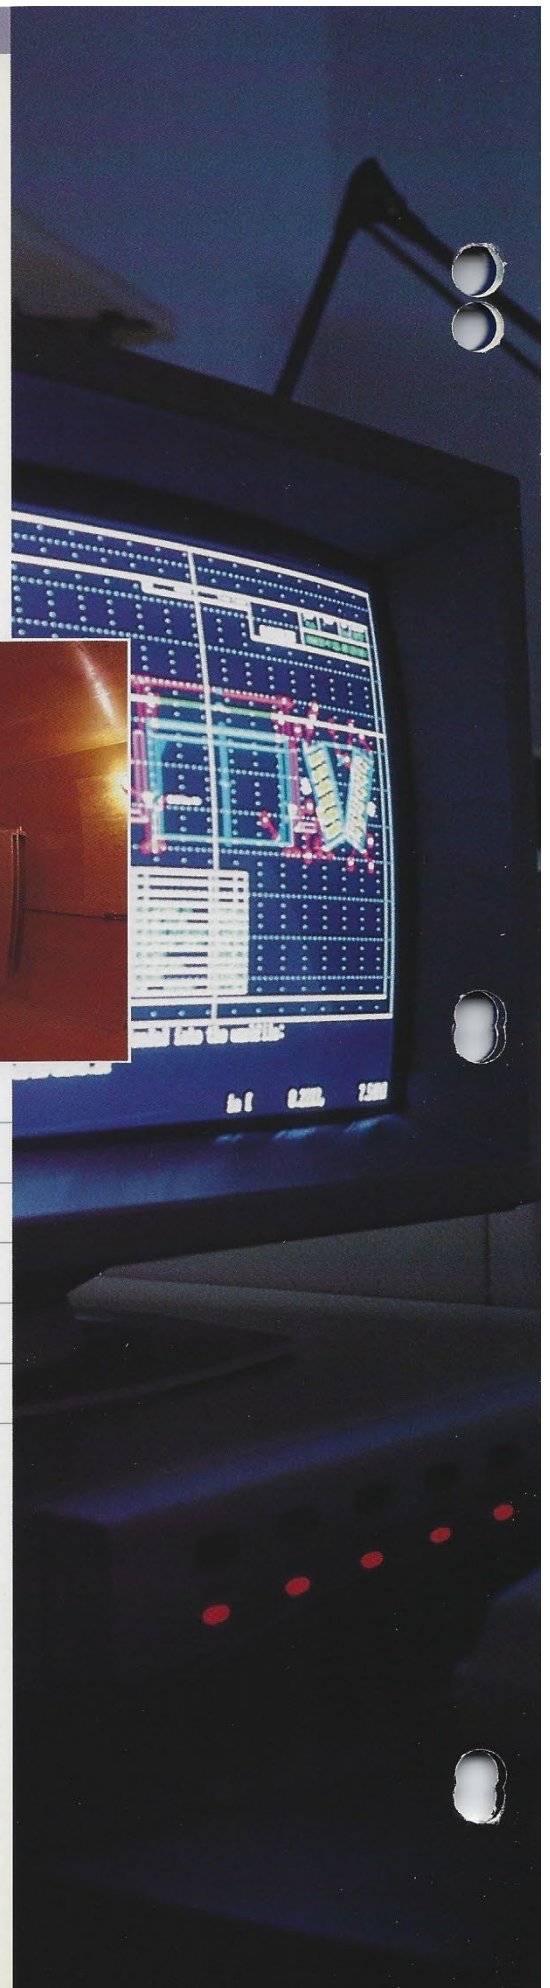

Innovations such as the Low Profile Unit Cooler and variable fin spacing established new standards in the commercial refrigeration field.

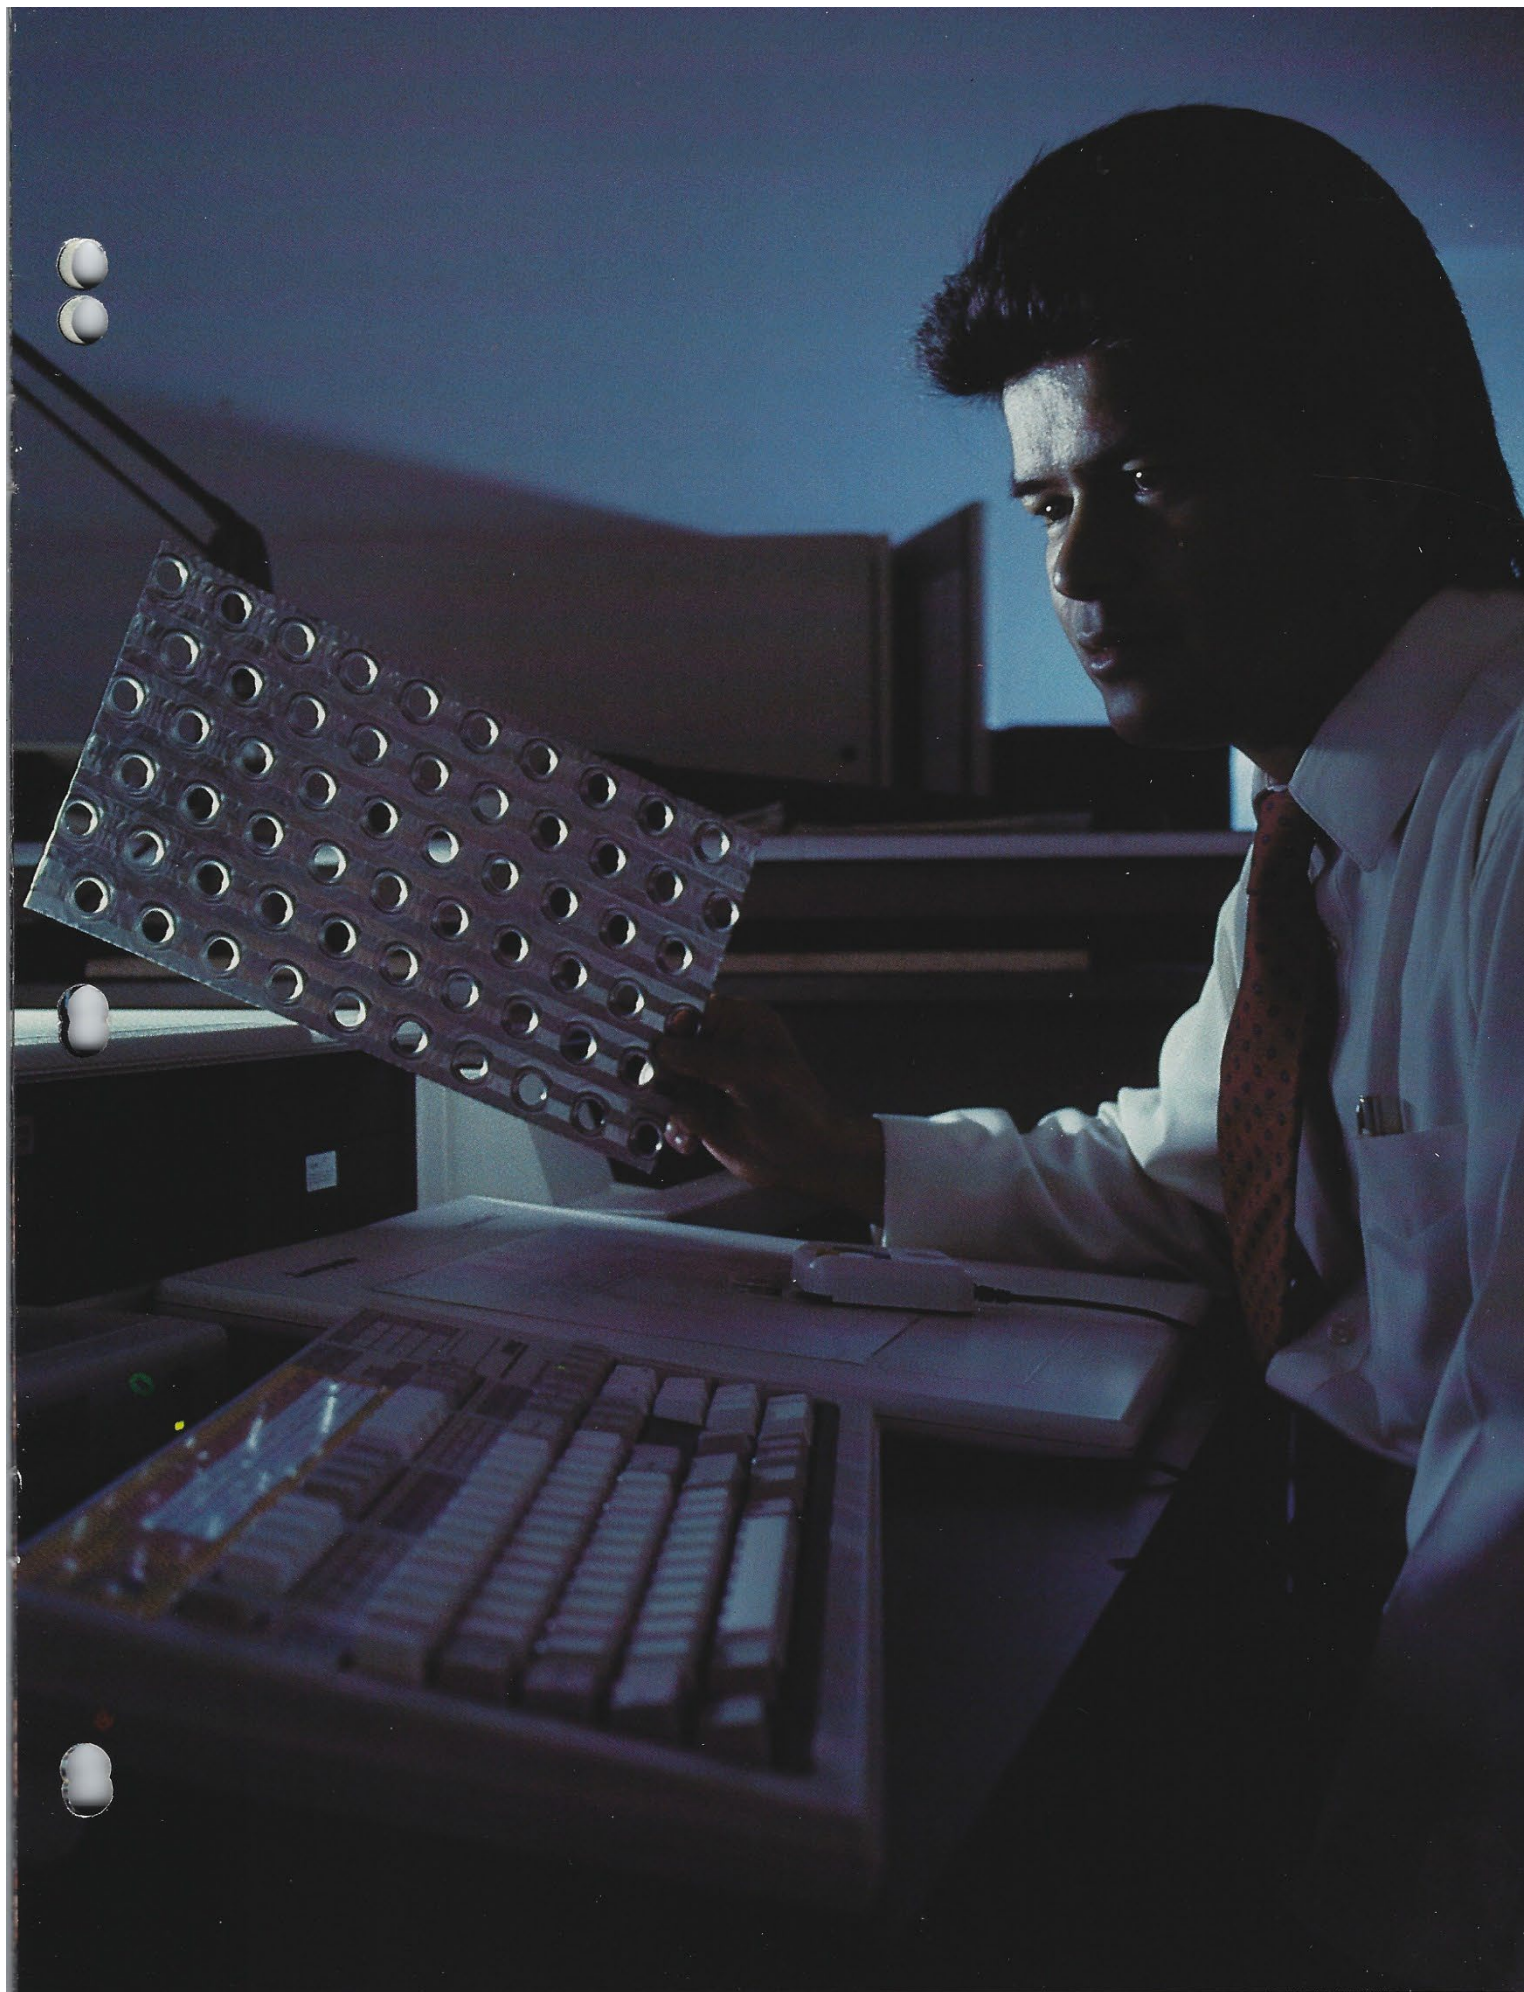

Now with expanded facilities, the addition of experienced and talented people and a comprehensive distribution network, the Heat Transfer Products Group is meeting the challenges of our time with greater impact than ever before.

A strong technical team

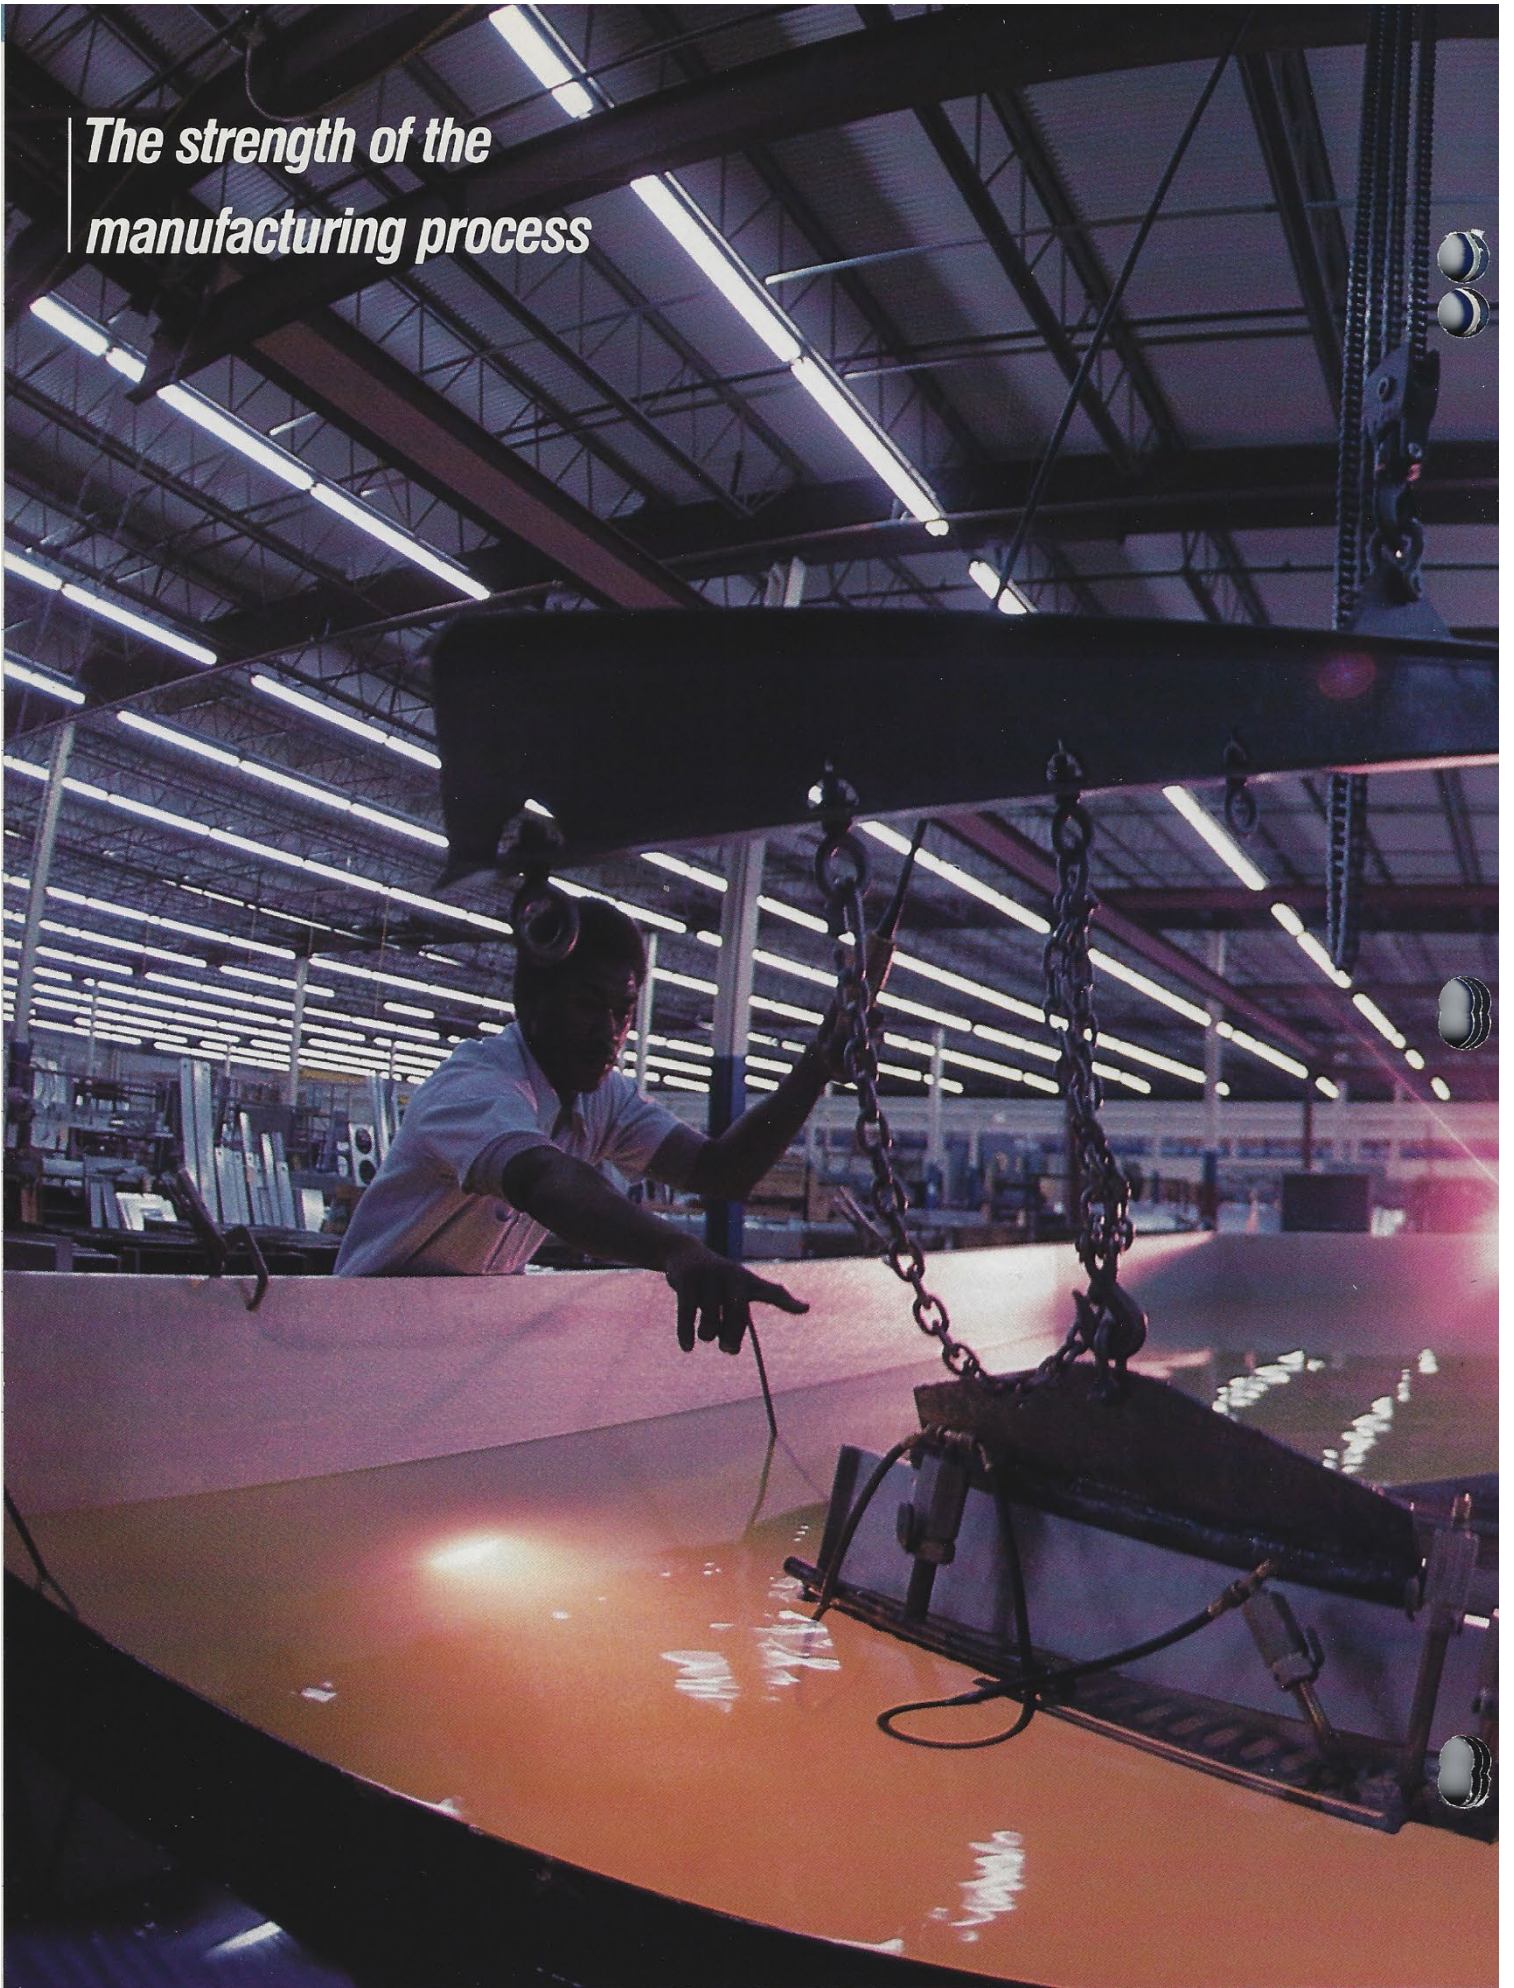

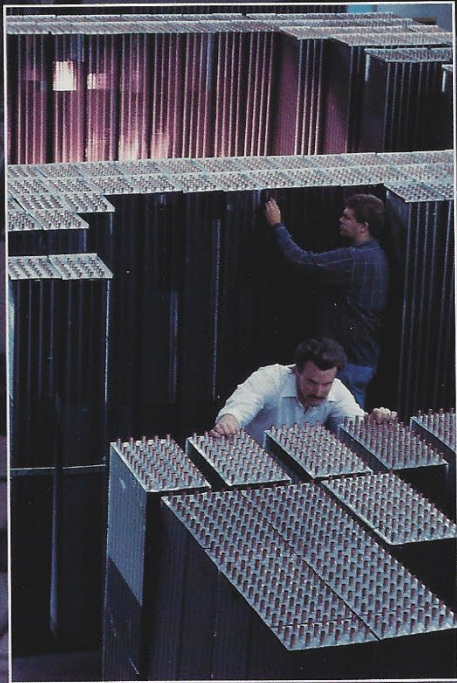

Each one of the manufacturing centers has its own technical support group that designs, develops and tests products. It is an ongoing process that involves conceptualization of new ideas. The engineering teams then communicate and share these ideas and experiences with each other. This enables quality products to be kept at the forefront.

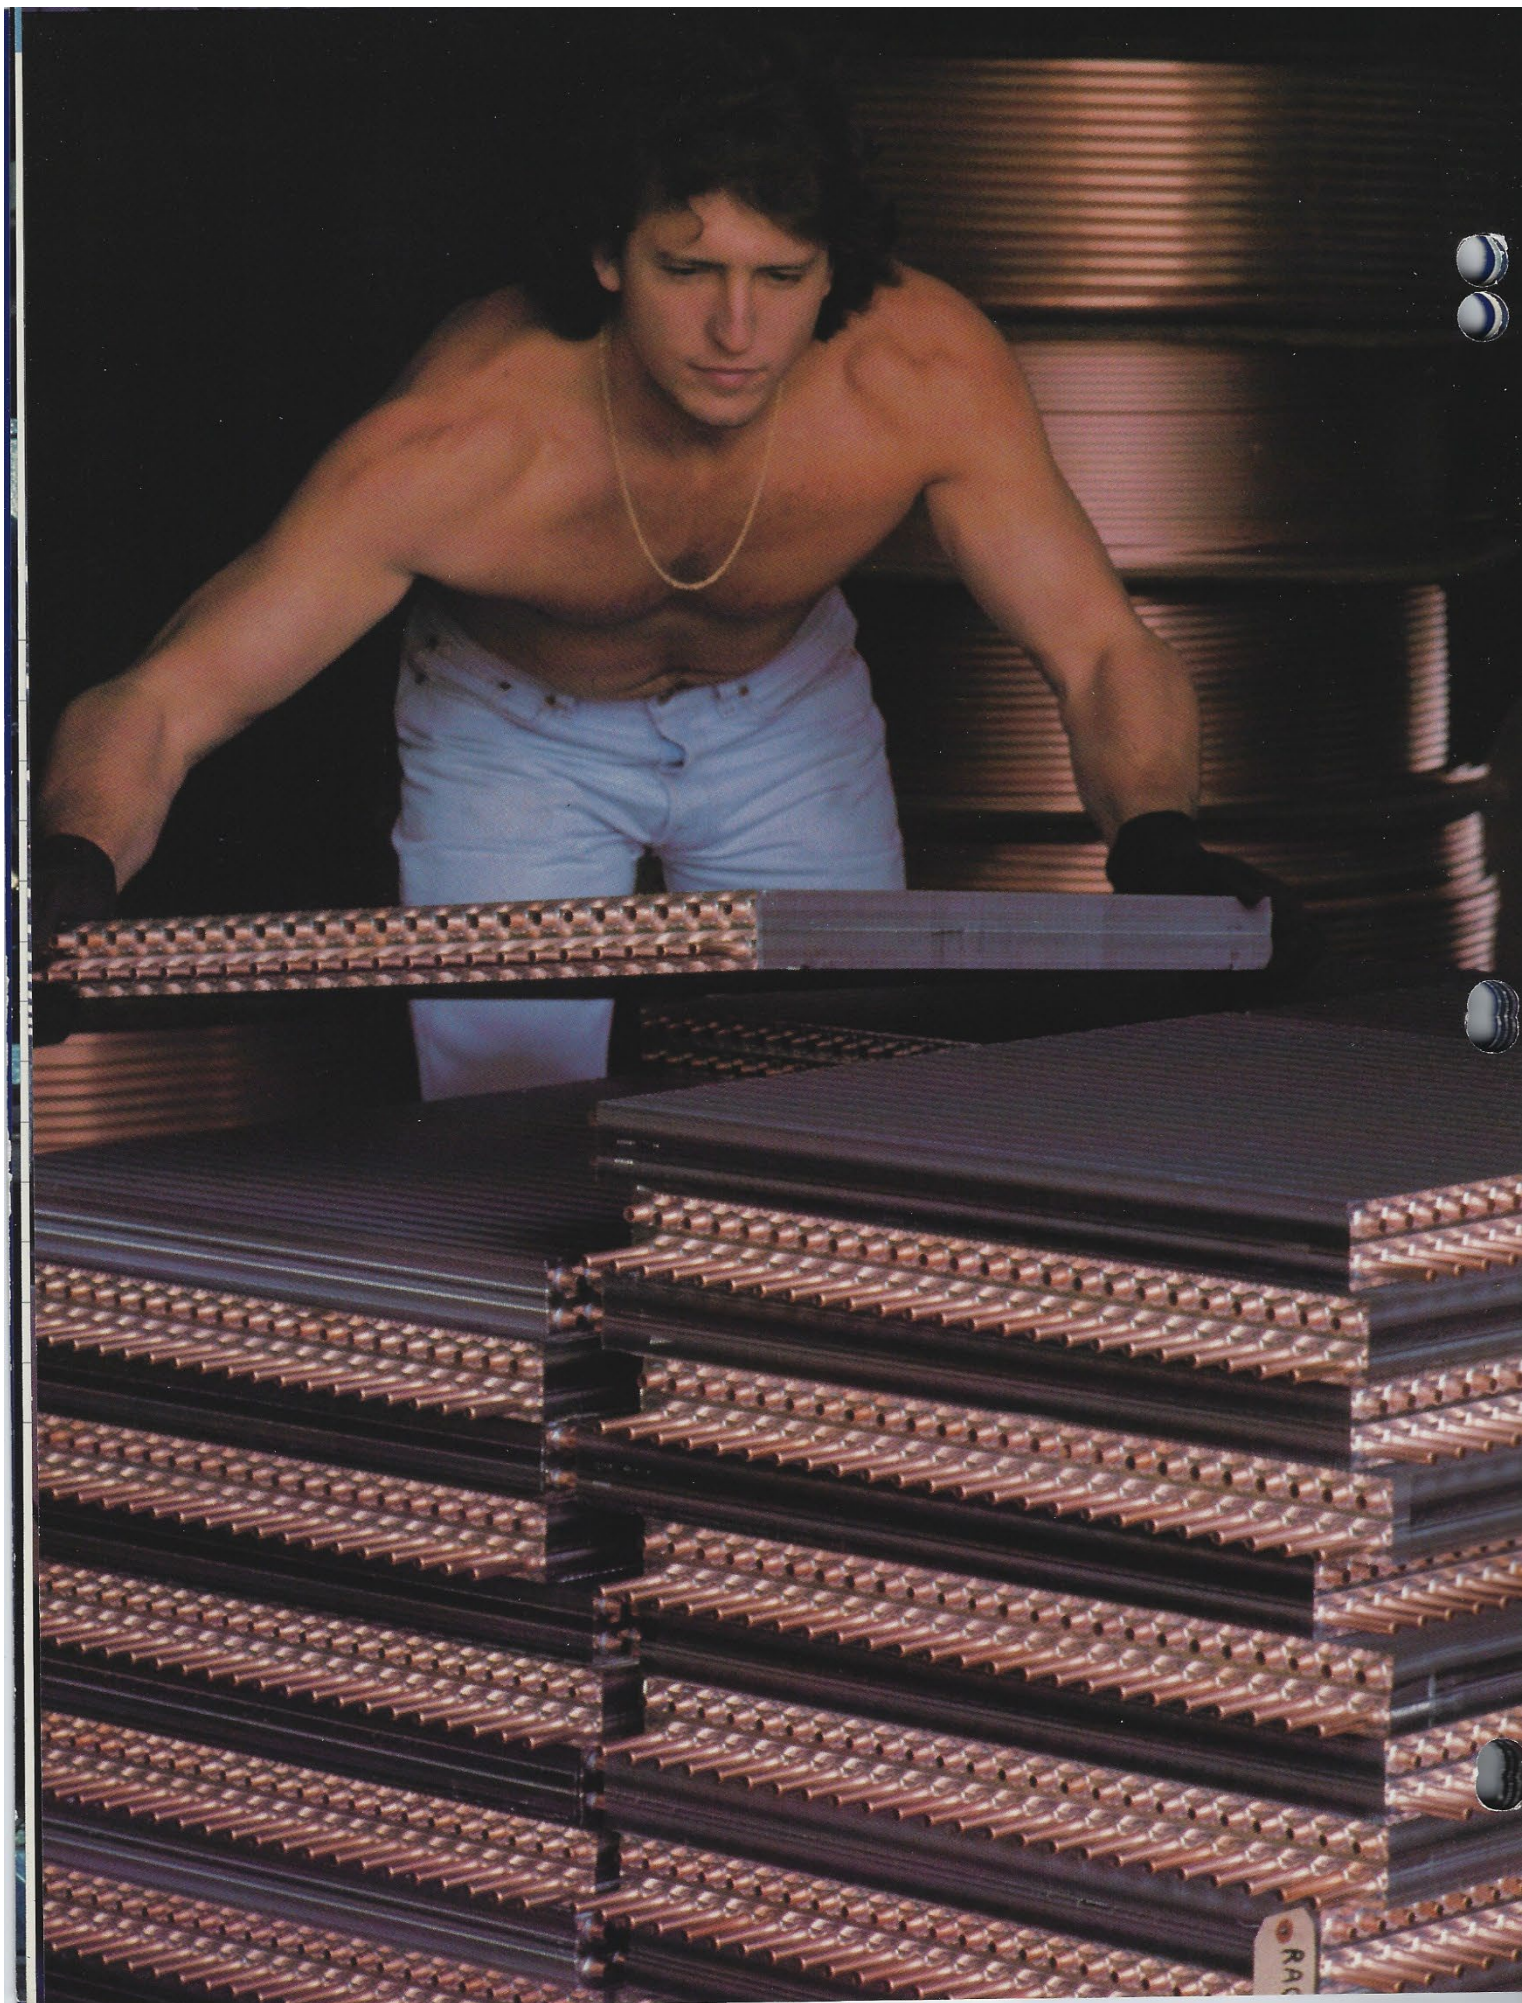

*The strength of the
manufacturing process*

Products ranging from the smallest reach-in unit cooler to large multi-compressor systems follow a rigid manufacturing standard. Quality control checks take place throughout the production process.

The combination of proven manufacturing experience coupled with modern manufacturing facilities enables the Heat Transfer Products Group to provide a complete refrigeration line consisting of unit coolers, air cooled condensers, condensing units, fluid coolers, air handling units, surface coils and complete refrigeration systems for warehouses, stores, office buildings and other facilities.

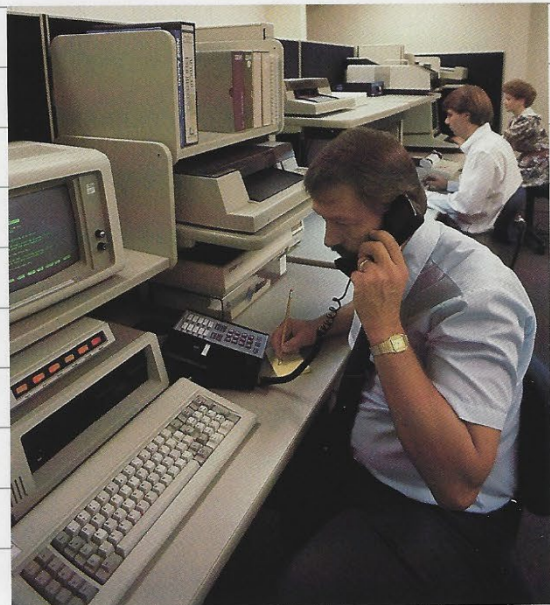

Growing production strength

Through a planned program of increased manufacturing and production capacity along with strategically placed warehouses, the Heat Transfer Products Group has the ability to provide short lead times and transit times. The ever increasing use of computer controlled equipment insures precision production allowing the manufacturing team to meet customers' most demanding specifications and delivery requirements.

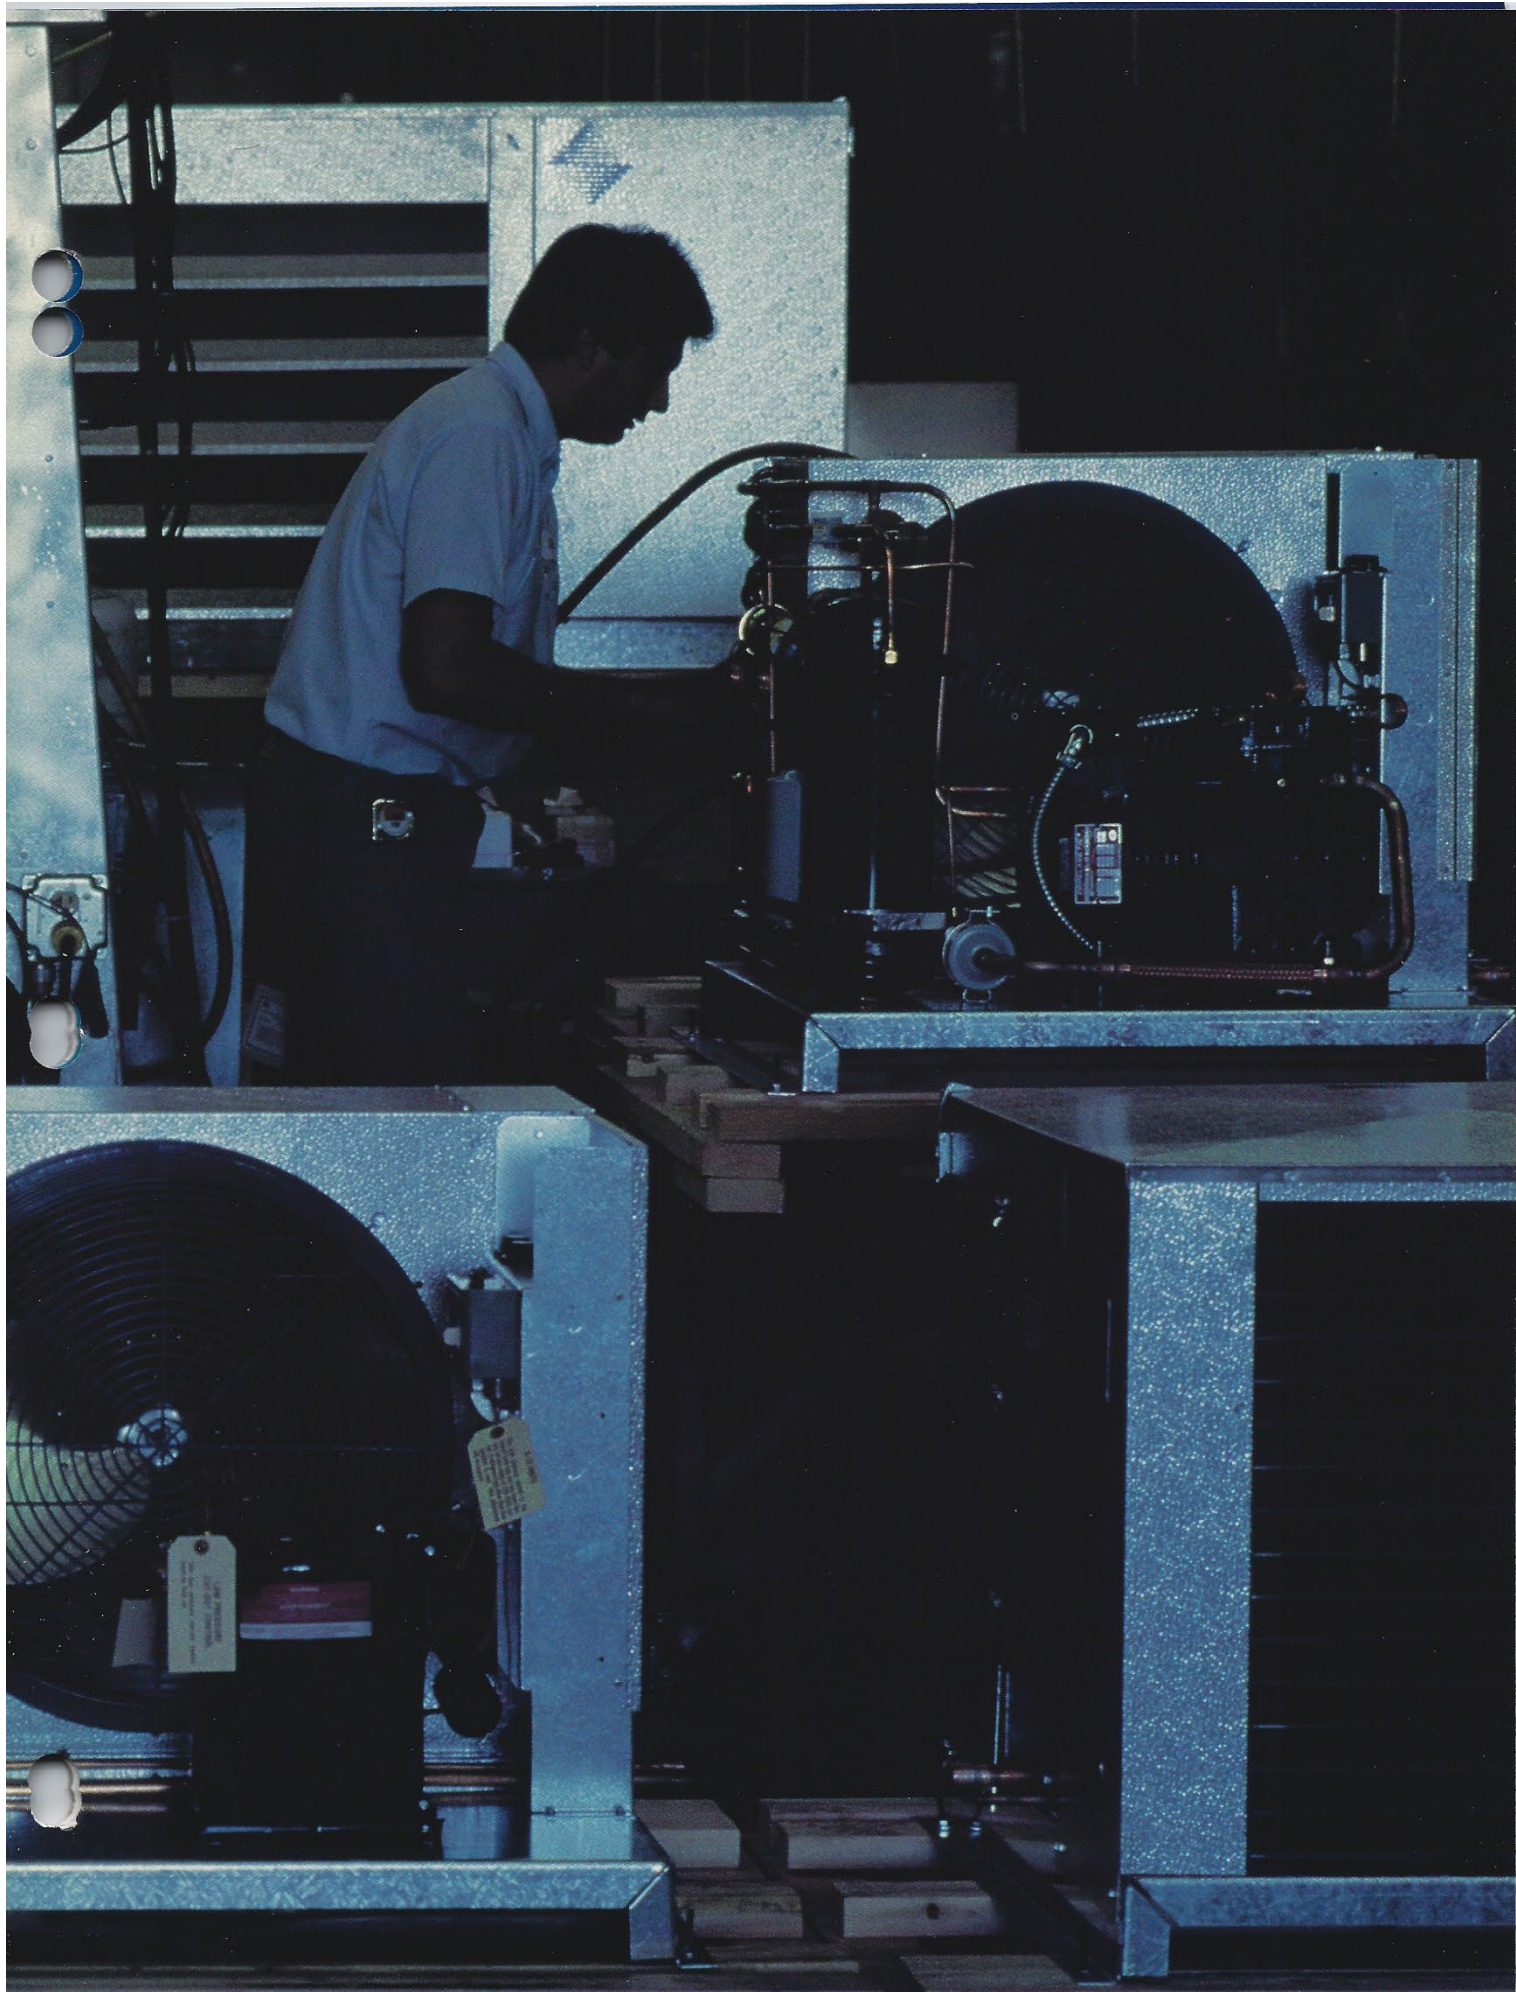

***Flexibility—
a unique strength***

The Heat Transfer Products Group has developed systems you can depend on to provide competitive versatility for quality products, both custom and standard, and is committed to a high level of customer service that fulfills needs quickly and efficiently.

Each order is given individual attention. It is monitored from the moment it is entered into the computer to the time it is ready for shipping.

Put our strength to work for you.
